Dear Mr.Choi,

Attached please find the pdf file of your paper which will appear in Kodai Mathematical Journal very soon and "CONSENT TO ASSIGNMENT OF COPYRIGHT".

Please kindly check the galley proof and let us know by e-mail if there is any correction should be done.

You can also mark on a hard copy and then send it to us by fax or airmail.

Your prompt response (by September 7, 2016) is highly appreciated.

Note that we, as a publisher, have the right to adjust several places (e. g. the references and the address) to the style of our journal.

Authors of papers which have been accepted for publication are requested to consent to the copyright agreement.

Please sign to "CONSENT TO ASSIGNMENT OF COPYRIGHT" and return it to us by fax or email or airmail as soon as possible.

Sincerely yours,

Eriko Kurita (Secretary),
On behalf of Managing Editor Yoshihiro Tonegawa

Dear Sir/Madam.

The attached is the consent to assignment of copyright which is signed and scanned.
I am sorry that I could not send it in a short time.

Sincerly,
Ikhan Choi.

Dear Mr. Choi

Thank you for sending the consent to assignment of copyright.
However, you forgot to put a date.
Please put the date in the document and send it again to us.

Also if there is any correction should be done in your paper
after checking the proof please let us know.
In the case of no correction, let us know as well.

We appreciate your cooperation.

Sincerely yours,

Eriko Kurita(Secretary),
On behalf of Managing Editor Yoshihiro Tonegawa

Dear Sir/Madam.

Thank you for letting me know my mistakes respectfully which were important.

I put the date, so please check the consent.

During the check of the galley proof, I found some sentences that would be helpful for reader to understand if they are modified.

They are not crucial and do not change what cannot be missed.

★ page 586 (8/17) line 6

For a subset \mathcal{K} of

- >

For a measurable subset \mathcal{K} of

=> For the integrand in the equation just below to be integrable without any problems, it would be good if the function $(-1)^{1-\kappa(\theta)}$ is measurable.

★ page 586 (8/17) line -5

$r(\psi)=96+\arccos(\cos 100\psi)$

- >

$r(\psi)=100+\arccos(\cos 103.15\psi)$

= > 96 and 100 are the numbers to be used for just an example. My original intention of the selection of the numbers was that the difference between them should be larger than $\pi=3.141592\dots$.

Unless the corrections are bothersome, please just consider taking my suggestion.
I could not find other corrections besides the two.

Thank you very much.

Sincerely,

Ikhan Choi.

Dear Mr. Choi,

Thank you for your e-mail about the paper.

Also we have received your Consent to Assignment of Copyright.

We appreciate your cooperation.

Sincerely yours,

Eriko Kurita(Secretary),
